PRACTICAL-1: Project Initiation, Requirement Analysis, Sitemap, Wireframe, and GitHub Setup

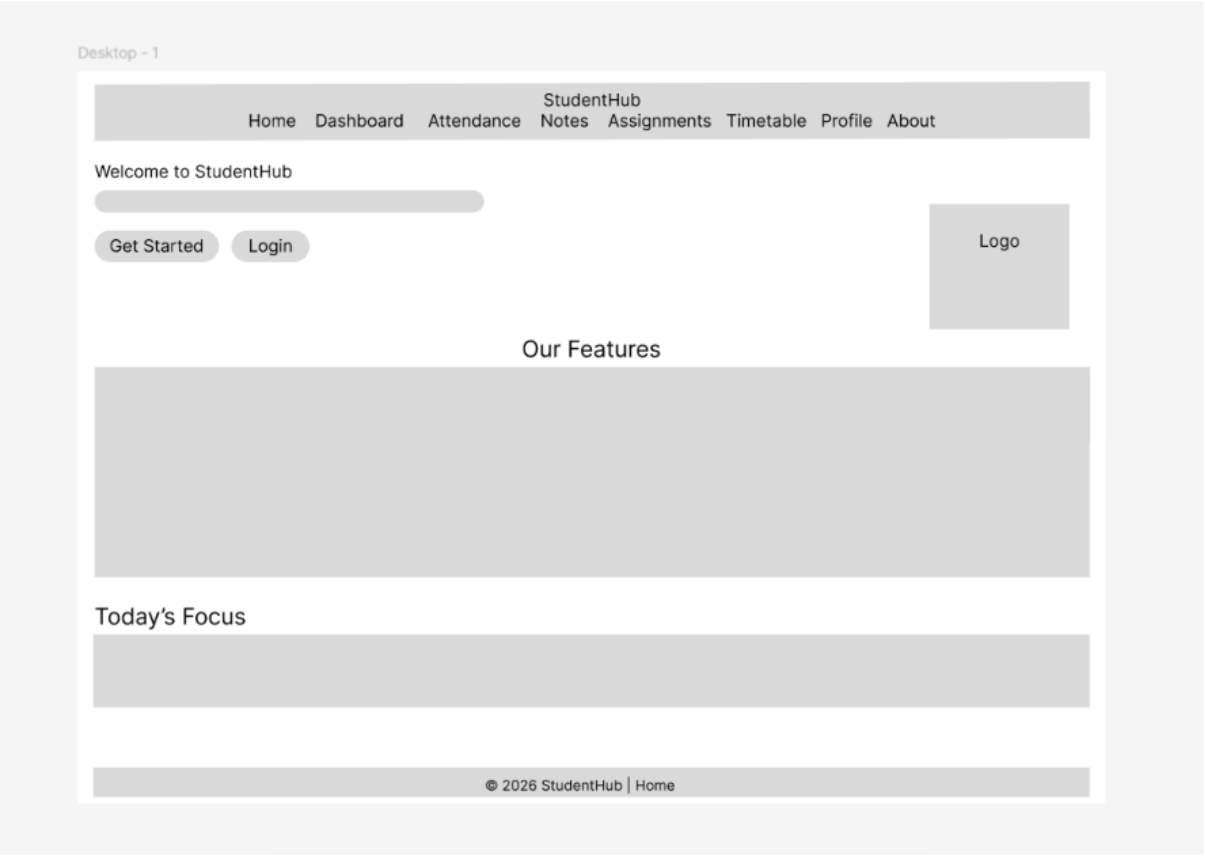

Problem Definition: Initiate the semester-long StudentHub portal by identifying the problem scope, user roles, key modules, navigation flow, and minimum 10 pages. Create a sitemap, low-fidelity wireframe, project folder structure, README file, and GitHub repository.

Output:

Key-Questions:

1. What is URL and Parts of URL?

URL (Uniform Resource Locator) is the address of a webpage or resource on the Internet. Its main parts are Protocol, Domain Name, Path, Query String, and Fragment.

2. How is an HTML File Processed in a Web Browser?

The browser receives the HTML file, reads and parses the code, loads CSS, JavaScript, and other resources, and then displays the webpage.

3. How Will Page Navigation Flow Be Managed Among All HTML Pages?
Navigation will be managed using the <a> tag and href attribute to connect different HTML pages through links and navigation menus.

4. How Will GitHub Commits Be Maintained After Each Practical?
After each practical, the completed files will be committed with a clear message and pushed to GitHub to maintain the history of work.

Learning:

- Understood how to define the problem scope and requirements of the StudentHub portal.
- Identified different user roles, such as students and faculty, and their responsibilities.
- Learned to organize the portal into important modules and pages with proper navigation flow.
- Created a sitemap and low-fidelity wireframes to plan the website structure and layout.
- Learned how to maintain a proper project folder structure, README file, and GitHub repository for project management.
