PRACTICAL-3: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Problem Definition: Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness.

Output:

Repository link:

https://github.com/manthan5033/WEB-DEVELOPMENT/tree/main/Practical-3

Key-Questions:

1. How does the layout adapt for mobile, tablet, and desktop screens?

-- The layout uses media queries to adapt from a single-column mobile layout to two-column tablet and multi-column desktop layouts.

2. Which layout technique is used and why?

-- **CSS Grid** is used for page sections and cards, while **Flexbox** is used for navigation

3. Are typography, spacing, colors, and contrast readable?

-- Typography, spacing, colors, and contrast are kept simple and clear for easy reading on all screen sizes.

4. Is the framework used consistently without unnecessary inline CSS?

-- CSS is maintained in a common external stylesheet, avoiding unnecessary inline CSS and keeping the design consistent across all pages

Learning:

- Learned how to make layouts **mobile-friendly** using media queries.
- Learned how to adjust layouts for **mobile, tablet, and desktop** screens.
- Learned to use an **external CSS file** instead of unnecessary inline CSS.
- Learned how to design multiple pages with a **consistent layout and navigation**.
- Maintained a consistent layout and navigation structure across all pages.
