PRACTICAL:- 13

Problem statement:

Create simple PHP JSON API endpoints for events or students and consume them using Fetch API. Perform list, add, update, and delete operations asynchronously without full page reload.

Github (link) : https://github.com/manthan5033/WEB-DEVELOPMENT/tree/main/Practical-13

Output:

StudentHub Student Management

Manage student records using PHP JSON API and Fetch API.

Student updated successfully.
